AN **MMPI** SOURCE BOOK

**Basic Item, Scale,
and Pattern Data
on 50,000 Medical Patients**

by Wendell M. Swenson,

John S. Pearson,

and David Osborne

Data based on the findings of the Minnesota Multiphasic Personality Inventory administered over a period of several years to 50,000 medical patients at the Mayo Clinic, Rochester, Minnesota, are reported here in tabular form. This represents the largest sample of medical patients on which MMPI data have been assembled to date. The collection of the vast quantity of information was made possible by the authors' development of a computerized scoring and interpreting program. The tables presenting the data are reproduced from computer printout sheets.

see back flap

from front flap

In an introduction the authors provide general background information on the characteristics of Mayo Clinic patients, indicating that they believe these patients are reasonably typical of midwestern Americans who might complete the MMPI in the context of a general medical evaluation and reasonably representative of a much larger population of literate, private medical patients throughout the United States.

The tables give the means and standard deviations for the basic MMPI scales; intercorrelations of the basic scales; frequencies of two- and three-point MMPI code types for both men and women; means and standard deviations for 220 special MMPI scales and scoring procedures and intercorrelations for these scales; and percentages of True and Cannot Say responses by age and sex.

The book will be particularly useful to research workers, students of personality theory, and specialists concerned with the construction of personality inventories. It may be useful also to clinicians in providing them with MMPI norms for use with medical patients, but the authors do not relate MMPI variables to medical or psychiatric diagnoses.

during the conceptual stages
of this project*

*and to the patients
of the Mayo Clinic without whom there
would be no hard data*

ACKNOWLEDGMENTS

When a person records a response of True, False, or Cannot Say to each of the 566 items of a personality inventory, and when identifying information and the subject's age and sex are added, the result is a total of 606 "bits" of information that are uniquely descriptive of that person. A collection of such data from each of 50,000 persons represents a total of 30,300,000 "bits." Combining, comparing, searching, and sorting these data to achieve some meaningful summarizations constitute a dramatic demonstration of electronic data processing. Behind this is the impressive evidence of human ingenuity in the invention and operation of digital computers.

In the light of such technologic achievements, it would be easy to overlook the active cooperation and personal contribution of the people involved in the data collection and processing that led to this book. It is impossible to acknowledge individually the several hundred staff members of the International Business Machines Corporation and the Mayo Clinic who contributed to the project. A few individuals, however, deserve special recognition: Mrs. Elizabeth Roberts, Mayo Clinic research assistant; Thomas Lutz, Pete Mataya, and Charles E. McCarthy of the IBM Medical Applications Division; and Dr. Howard P. Rome and the late Dr. F. Ray-

mond Keating, Jr., of the Mayo Clinic staff. Prof. Starke R. Hathaway of the University, co-author of the Minnesota Multiphasic Personality Inventory (MMPI), provided invaluable encouragement and suggestions.

Our work was supported by Research Grant MH-6947 from the National Institute of Mental Health, Public Health Service.

Finally, we are most indebted to the 50,000 Mayo Clinic patients who completed the MMPI, often with full awareness that they were contributing their time without hope of any direct or tangible benefit to themselves.

An MMPI Source Book

Basic Item, Scale, and Pattern Data

on 50,000 Medical Patients

INTRODUCTION

The Minnesota Multiphasic Personality Inventory (MMPI) has come to occupy a unique place among objective measurements of personality characteristics, both as a clinical instrument for evaluating the individual patient and as a research tool for testing hypotheses concerning the many aspects of human behavior. The general approach it represents—describing and predicting individual or group behavior on the basis of a sampling of verbal responses—has never won unanimous endorsement among behavioral scientists. Of late, attention has been focused on the MMPI in debating such issues as invasion of personal privacy and the validity of personality tests in general [1]. But in spite of questions that have been raised and restrictions that have been imposed on the use of the inventory in certain situations, the number of professional users has continued to grow. Whatever its imperfections, the MMPI (or something similar to it) will continue in use for a long time to come. Accordingly, serious students of human behavior should give thoughtful consideration to new sources of information about the behavior of groups and individuals in responding to the items of the MMPI.

The purpose of this volume is to examine the responses to the MMPI of 50,000 medical outpatients and to provide MMPI norms for such patients. With these findings, we hope

to fill a void that has existed. Previous studies of medical patients using the MMPI have had either a small number of subjects or a highly selected sample; therefore, it was hazardous to generalize from the results.

At present, several reasons exist for closer examination of a medical outpatient population as a normative group that may be useful in future efforts to improve the discriminative power of the MMPI. Basic among these reasons is the growing appreciation of the MMPI as a screening device that may be used to identify emotional problems in the medical setting, hence permitting conservation and better utilization of scarce manpower and skills in mental health occupations [21]. There is also increasing recognition of the need for more precise information about the “self-reporting attitude” or “set” to give either defensive or overly self-critical answers to MMPI items in different populations. Comparison of the data in this volume with normative data in other publications suggests some significant differences between “medical outpatients” and groups such as “college students,” “job applicants,” and “normal adults,” even though almost all the individual members of such groups are themselves medical outpatients at one time or another.

Our acquisition of 50,000 MMPI records grew out of a project at the Mayo Clinic in Rochester, Minnesota, to test

the acceptability to both patients and medical staff of an automated scoring and interpretation procedure. Aspects of the entire project have been reported in previous publications [9-12, 14-16, 18-22]. In brief, beginning in 1959, we set out to develop some simple rules by which numerical scores on 4 validity and 10 clinical scales of the MMPI might be translated into a series of descriptive statements. These were intended to be summary descriptions and predictions of important behavioral traits and aspects of the patient's personality that might reasonably be inferred from a given set of scores. Although previous actuarial descriptive studies helped to stimulate and direct our thinking, we found that, for the most part, adjective or other descriptions based on code types, averaged profiles, or elevations of individual scales were ill suited to describe the medical patient population [8]. In developing our interpretive statements, we had to take into consideration the variability in scores within the general medical population that frequently overlaps the psychiatric patient population on many MMPI scales. We also set ourselves the task of eliminating psychological and psychiatric terminology from our descriptive statements, seeking instead to record in nontechnical English the essence of both the quality and the degree of behavioral deviation that might be inferred from particular diagnostic terms such as "paranoia" and "hysteria."

The format of the MMPI itself was modified to permit rapid automated scoring and this was combined with the automated interpretation. By 1961 the program was in operation.*

Physicians at the Mayo Clinic who used the MMPI quick-

ly adopted the automated form and rated it as a valuable adjunct to clinical appraisal of emotional status; this was particularly true of specialists in internal medicine, neurology, and psychiatry. At the outset, use of the MMPI by the physician was optional. But if the automated form was to be used, we insisted that the user agree to administer it routinely to every patient who could conceivably mark his answers to the items. Patients were assured by their physicians that the procedure was routine, that the data would be kept confidential, that the inventory was part of the general medical evaluation, and that participation was desired for research purposes as well as for practical application in individual assessment.

The material presented here is intended for research workers, students of personality theory, and those concerned with the construction of personality inventories. The tables present internal relationships among MMPI variables along with information about age and sex. There is no attempt in this volume to relate MMPI variables to medical or psychiatric diagnoses; however, we hope to provide such information in subsequent publications.

These data may, in addition, be helpful to the clinician in providing him with norms for use with medical patients. For further information about the clinical aspects of automated personality testing, we refer the reader to *A User's Guide to the Mayo Clinic Automated MMPI Program* [10].

* The MMPI scoring and interpretation service, including all modifications made in the interpretative statements to date, is available from Mayo Medical Laboratories, Rochester, Minnesota, 55901.

The Mayo Clinic Medical Patient Population

The usefulness of any normative data is limited by the degree to which a given sample may be representative of a wider population. If medical patients of the Mayo Clinic constitute a population unique unto itself, any statistics on them will be of limited value in spite of the impressive size of the sample. However, we believe that the patients included in our sample are reasonably representative of middle-class midwesterners who might complete the MMPI in the context of a general medical evaluation. These, in turn, we believe are reasonably representative of a much larger population of literate private medical patients throughout the United States. In explanation of this statement, some general description of the Mayo Clinic patient population is necessary.

The MMPI data reported herein were collected between 1962 and 1965. In this interval approximately 150,000 patients annually were registered in the Mayo Clinic. Of these, 39 percent were new registrations, that is, patients not previously registered at this clinic, and 61 percent were re-registrations, that is, patients who had been at this clinic one or more times previously. The total of 150,000 annual patients includes newborn infants, young children, and others who could not be considered as candidates for the MMPI project.

All the patients included in the MMPI data were ambulatory outpatients; thus excluded were the acutely ill patients and the referred patients who required hospital care because of surgical or other procedures. All patients referred primarily

for psychiatric evaluation and treatment were likewise excluded from the MMPI sample. During the interval in which the MMPI records were collected, an average of 30.6 percent of all patients were hospitalized on medical and surgical services and an average of 19.3 percent received surgical treatment. An unknown but relatively high proportion of surgical and medical patients were admitted directly to the hospital or were acutely ill when seen as outpatients, and thus were not given the MMPI. Approximately 3.9 percent of all patients registered at the Mayo Clinic were referred to the Section of Psychiatry, either as the primary service or as a service incidental to evaluations in sections of internal medicine or other specialty sections. About 0.6 percent of all Mayo Clinic patients are hospitalized in a psychiatric unit at some time while they are receiving clinic care. Some of these patients, but by no means all, would have taken the MMPI as medical outpatients before psychiatric hospitalization.

Patients of the Mayo Clinic who are less than 16 years old are normally seen in the Section of Pediatrics where the MMPI was not used routinely during the time of the study. Thus the ages of patients listed as being less than 20 years old actually ranged from 16 through 19 years.

Of all patients registered during the time of the study, 23.8 percent came from Rochester, Minnesota, and the immediate surrounding area; 21.1 percent were from elsewhere in Minnesota; 9.6 percent came from Illinois; 8.9 percent from Iowa; 6.2 percent from Wisconsin; 3.7 percent from Indiana; 2.9 percent from Michigan; 2.2 percent from South Dakota; 2.2 percent from Nebraska; 1.5 percent from Missouri; 1.4 percent from North Dakota; and 1.0 percent from Ohio.

Other patient registrations included 0.1 percent from the New England states; 1.2 percent from the Middle Atlantic states; 1.8 percent from the South Atlantic states; 1.1 percent from the east south central states; 2.5 percent from the west south central states; 2.1 percent from the Rocky Mountain states; 2.0 percent from the Pacific states; and 2.2 percent from Canada.

Approximately 1.0 percent of all registrants came from Latin American countries, and although many other foreign countries throughout the rest of the world were represented, such patients made up less than 0.5 percent of the total. Moreover, nearly all of the foreign patients, including those from Latin America, were excluded from taking the MMPI, unless English was the primary and preferred language.

From the foregoing information, it seems reasonable to conclude that, for the most part, the Mayo Clinic is devoted to the regional practice of medicine, the majority of all patients coming from within a radius of 400 miles.

The reasons that patients have for coming to the Mayo Clinic are diverse and have never been ascertained or categorized in any objective fashion. They vary from expediency in the case of healthy local persons seeking physical examinations for insurance applications to pathologic dependency on this particular institution.

Many misconceptions exist concerning the nature of the practice at the Mayo Clinic. Some have assumed that the patient population would be hopelessly biased by disproportionate numbers of wealthy neurotics who come to this clinic from great distances seeking treatment of nonexistent organic diseases. Others have presumed that the patient population

is heavily loaded with patients who have unusual combinations of rare diseases and difficult diagnostic or treatment problems. It is true that these two groups are represented both in the general clinic population and in the MMPI sample, but their numbers are small in relation to the total sample.

Regrettably for purposes of this study, information concerning socioeconomic and educational background was not recorded in any uniform fashion during the interval in which the MMPI records were collected. Although the cost of travel to Rochester for those who live some distance away undoubtedly operates to reduce the proportion of low-income, low-education patients and although the small number of wealthy patients who come to the clinic from great distances operates to raise the average socioeconomic level somewhat, such influences probably produce very slight socioeconomic bias. The Minnesota farmer seeking attention for a medical problem who comes directly to the Mayo Clinic without a referral from his family physician because a neighbor spoke well of the institution is closer to the mode for this clinic population than the celebrity some people picture as being typical.

Naturally, administration of the MMPI was limited to those who had sufficient reading ability in the English language and who had no disabling conditions such as senility or acute pain. Some marginal candidates may have been excluded because of a reluctance on the part of the physician to put them to this trouble. We believe, however, that our medical colleagues were conscientious in observing the instructions to administer the MMPI to every patient who could possibly complete it.

As demonstrated in several time samples, our general experience throughout the study was that 95 percent of patients who were asked to complete the inventory were willing and able to do so. Only 0.2 percent refused to cooperate from the outset, and 3 percent did not return the test. We excluded 1.8 percent of all profiles as being invalid on the basis of a raw score of Cannot Say responses that was greater than 120 or a raw F score greater than 20. The L and K scales were not considered in the decision to include or exclude a given profile from the sample.

Our intention was to accumulate the MMPI records of 50,000 consecutive medical patients whose profiles were valid in terms of the F score and the Cannot Say score, as noted. Unfortunately, several minor human and mechanical errors prevented us from following the original plan. At one point, a malfunction in the scoring machine gave a spurious increase in the Cannot Say score on approximately 4,000 patients. At another point, we found that records on approximately 400 nonpatients, applicants for admission to an educational program in physical therapy, had been included. At still another point, a computer operator erased a portion of magnetic tape, thus inadvertently destroying the scores for several thousand patients. Because of these problems, the 50,000 patients were not consecutive admissions; however, the gaps in the data collection were kept as small as possible. The sample reported on here was checked repeatedly to ensure that each patient was an outpatient who was registered to a medical section, that age and sex were recorded accurately, and that when more than one MMPI was administered, only the first one was included in the sample.

The tables of this volume, which categorize the patients by age and sex, indicate that although there were slightly more females than males in the total test population, there were, in contrast to the distribution in the general population of the United States, more elderly males than elderly females. For both sexes, the modal age was in the range from 50 through 59 years.

In grouping patients by age decade, we resorted to one of many arbitrary conventions that were necessary to summarize the vast amount of data. The tables that we include here certainly do not represent all possible ways of organizing the information. We hope, however, that our selection will be useful to those who work with the MMPI.

Explanation of Tables

The nine tables which constitute the bulk of this report are organized in the following way: Part 1, Basic MMPI Scales, includes tables giving means and standard deviations for the basic scales, intercorrelations among them, and data on code types. Part 2, Research Scales and Special Scoring Procedures, provides means and standard deviations on 220 scales and intercorrelation data. Part 3, Item Data, gives the percentage of True and Cannot Say responses.

Part 1: Basic MMPI Scales. Table I presents the mean T scores and standard deviations of the 14 standard clinical and validity scales for the 50,000 patients grouped by age and sex. This table, more than any other, may give the user who is familiar with the MMPI a quick indication of what our medical patient population is like "on the average." It is

quickly evident that the medical patient population in general tends to be slightly deviant in terms of most of the clinical scales when compared with the "Minnesota Normals" on whom the T scores for the MMPI were originally based and for whom a mean T score of 50 and standard deviation of 10 are common to all scales. Therefore, one should not be surprised in clinical practice if the profile of a medical patient contains slightly elevated scores. Table II presents the intercorrelations of these 14 scales based on non-K-corrected raw scores.

Tables III and IV show the frequency of MMPI codes for the 50,000 patients categorized by age and sex and degree of code elevation. Use of this table presumes familiarity with MMPI coding systems. For a detailed description of this subject, the reader is referred to Dahlstrom, Welsh, and Dahlstrom, *An MMPI Handbook* [3]. Briefly, a code summarizes an individual MMPI profile in terms of the relative elevations of the various scales, each represented by a single digit. The Hypochondriasis (Hs) scale is represented by 1, Depression (D) by 2, Hysteria (Hy) by 3, Psychopathic Deviate (Pd) by 4, Masculinity-Femininity (Mf) by 5, Paranoia (Pa) by 6, Psychasthenia (Pt) by 7, Schizophrenia (Sc) by 8, Hypomania (Ma) by 9, and Social Introversion (Si) by 0. The code numbers for the various scales are arranged in descending order of score elevation. Various symbols are inserted to indicate the degree of elevation. For example, in the Welsh system, a 1*6"2'3 code would indicate that the profile has an extreme elevation on the Hypochondriasis scale (T score of 90 or above) while the Paranoia scale has a T score between 70 and 80. We have grouped our codes as "prime"

and "nonprime," the former indicating a marked degree of elevation (T score of 70 or above) and the latter indicating a T score of 69 or less (roughly within "normal limits"). The user of Tables III and IV may find the relative frequency in our medical population of various one-, two-, and three-point codes. The most common two-point code types in our population are the 13 and 31; therefore, these code types can be expected to appear relatively frequently in medical settings.

Part 2: Special Scales and Scoring Procedures. Table V lists the names and authors of 220 MMPI scales and special scoring procedures, including the basic validity and clinical scales. For the 10 basic clinical scales it is important to note that the numerical designation in Table V does not correspond to the code designations in Tables III and IV. The numerical listing of scales 1 through 213 in Table V here follows that in Appendix I of the first edition of *An MMPI Handbook* [3], which attempted to bring together all MMPI scales (both published and unpublished) up to 1960. We considered attempting to list all the additional scales published since 1960, but decided against further extension of an already lengthy table. Scales 214 through 220 in Table V were included because they had special interest for us in connection with current investigations. For these seven scales item numbers and scoring direction are also provided [2, 7, 11, 17]. The item numbers and scoring direction for the other 213 scales may easily be found in the first edition of *An MMPI Handbook*. The revised edition of the *Handbook* (scheduled for publication too late for us to base our table on

it) includes in Volume I a listing of only basic scales and scales derived from them; Volume II will include an extensive list of research scales. Numerical designations have been dropped but Volume II will give, for reference purposes, the original numbers assigned to the scales in the first edition of the *Handbook*.

Listed in Table VI are means and standard deviations based on raw scores for the 220 scales and special scoring procedures. T scores were used only when a special scoring procedure or index required conversion to T scores before computation. The information is categorized by sex and age decade for the 50,000 medical patients.

Table VII presents the intercorrelations for the 220 scales and scoring procedures on the entire population. All coefficients are based on raw scores without K correction. When special scoring procedures are used, such as the "Internalization Ratio," T scores may be used as indicated by Dahlstrom, Welsh, and Dahlstrom [3].

Part 3: Item Data. Tables VIII and IX probably will be of the greatest interest to most users of this volume. These tables present, for females and males, the percentage of True and Cannot Say responses to each item of the MMPI by the patients in each age decade and for all ages combined. The order of items is that found in the group form booklet [4]. These tables include responses to the 16 items that are repeated in the MMPI booklet. The percentage of patients answering False for any item may be obtained by adding the percentage of True and the percentage of Cannot Say answers for any item and subtracting the total from 100 percent.

A Look Ahead

At the present time, we are examining the personality correlates of physical disease by administering the MMPI to large numbers of patients who suffer from a specific disease and comparing their scores to our 50,000 general medical patients and to the original normal group used in development of the MMPI. A number of disease entities will be studied and results will be reported in papers and eventually in a book. A study of patients with rheumatoid arthritis has already been completed [13] and in the near future results of other studies will be available.

PART 2

Research Scales and Special Scoring Procedures

Table V. SCALE NAME AND AUTHOR(S) FOR 213 MMPI SCALES AND SCORING PROCEDURES,

AND NAME, AUTHOR(S), AND SCORING DIRECTION FOR 7 SCALES

SCALE NUMBER	SCALE NAME AND AUTHOR(S)
1	FIRST FACTOR * WELSH
2	ACADEMIC ACHIEVEMENT * GOUGH
3	ADMISSION OF SYMPTOMS * LITTLE AND FISHER
4	COLLEGE ACHIEVEMENT * ALTUS
5	COLLEGE ACHIEVEMENT, FEMALE * CLARK
6	AGING * BROZEK
7	ALCOHOLIC DIFFERENTIATION * HOYT AND SEDLACEK
8	ANXIETY INDEX * WELSH
9	ALCOHOLISM * HAMPTON
10	ALCOHOLISM * HOLMES
11	ATTITUDE TOWARD OTHERS * GIBSON
12	ADJUSTMENT TO PRISON * BEALL AND PANTON
13	ANXIETY REACTION * ROSEN
14	ATTITUDE TOWARD SELF * GIBSON
15	ANXIETY SCORE * MODLIN
16	IOWA MANIFEST ANXIETY * TAYLOR
17	MANIFEST ANXIETY, SHORT FORM * BENDIG
18	AVERAGE ELEVATION SCORE * MODLIN
19	RESPONSE BIAS * FRICKE
20	SUCCESS IN BASEBALL * LA PLACE
21	THIRD FACTOR * WELSH
22	CAUDALITY * H. L. WILLIAMS
23	CORRECTION FOR HYPOCHONDRIASIS * MC KINLEY AND HATHAWAY
24	CRITICAL ITEM LIST * HELLMAN
25	COLLEGE COUNSELEE * BURDOCK
26	CONTROL * CUADRA
27	CODE 12 * GUTHRIE
28	CODE 13 * GUTHRIE
29	CODE 21 * GUTHRIE
30	CODE 23 * GUTHRIE
31	CODE 27 * GUTHRIE
32	CODE 31 * GUTHRIE
33	CODE 32 * GUTHRIE
34	CODE 34 * GUTHRIE
35	CODE 36 * GUTHRIE
36	COMPETITOR * BOOTH
37	CONVERSION REACTION * ROSEN
38	COUNSELOR PERSONALITY * COTTLE, LEWIS, AND PENNEY
39	CYNICISM FACTOR * COMREY
40	DEPRESSION * HATHAWAY AND MC KINLEY
41	PURE DEPRESSION * WELSH
42	SUBJECTIVE DEPRESSION * HARRIS AND LINGOES
43	PSYCHOMOTOR RETARDATION * HARRIS AND LINGOES
44	PHYSICAL MALFUNCTIONING * HARRIS AND LINGOES

SCALE NUMBER	SCALE NAME AND AUTHOR(S)
45	MENTAL DULLNESS * HARRIS AND LINGOES
46	BROODING * HARRIS AND LINGOES
47	DELINQUENCY * GOUGH AND PETERSON
48	DENIAL OF SYMPTOMS * LITTLE AND FISHER
49	DOMINANCE * GOUGH, MC CLOSKY, AND MEEHL
50	DOMINANCE, REVISED * GOUGH, MC CLOSKY, AND MEEHL
51	DEPRESSION, OBVIOUS * HARMON AND WIENER
52	DELINQUENCY * HATHAWAY AND MONACHESI
53	DEPRESSIVE REACTION * ROSEN
54	DISSIMULATION * GOUGH
55	DISSIMULATION, REVISED * GOUGH
56	DEPRESSION, SUBTLE * HARMON AND WIENER
57	DEPENDENCY * NAVRAN
58	ESCAPISM * BEALL AND PANTON
59	EMOTIONAL IMMATURITY * PEARSON
60	EGO OVERCONTROL * BLOCK
61	EPILEPSY * RICHARDS
62	EGO STRENGTH * BARRON
63	ETHNOCENTRICISM * ALTUS AND TAFEJIAN
64	EVALUATION OF IMPROVEMENT * FELDMAN
65	VALIDITY * HATHAWAY AND MC KINLEY
66	FEMININITY * GOUGH
67	DISSIMULATION INDEX * GOUGH
68	FEMALE MASOCHISM * HECHT
69	GENERAL PERSONALITY VARIANCE * ESTES AND HATHAWAY
70	GENERAL MALADJUSTMENT * WELSH
71	GRADUATE SCHOOL POTENTIAL * GOUGH
72	PRELIMINARY HYPOCHONDRIASIS * MC KINLEY AND HATHAWAY
73	HEADACHE PRONENESS * ARCHIBALD
74	HOSTILITY CONTROL * SCHULTZ
75	HEALTH CONCERN FACTOR * COMREY
76	HYPOGLYCEMIA-NEUROSIS * HOUK AND ROBERTSON
77	HOSTILITY * COOK AND MEDLEY
78	HONOR POINT RATIO * GOUGH
79	HYPOCHONDRIASIS * HATHAWAY AND MC KINLEY
80	PURE HYPOCHONDRIASIS * WELSH
81	OVERT HOSTILITY * SCHULTZ
82	CONVERSION HYSTERIA * MC KINLEY AND HATHAWAY
83	PURE HYSTERIA * WELSH
84	DENIAL OF SOCIAL ANXIETY * HARRIS AND LINGOES
85	NEED FOR AFFECTION * HARRIS AND LINGOES
86	LASSITUDE-MALAISE * HARRIS AND LINGOES
87	SOMATIC COMPLAINTS * HARRIS AND LINGOES
88	INHIBITION OF AGGRESSION * HARRIS AND LINGOES

Table V. SCALE IDENTIFICATION FOR 220 SCALES--continued

SCALE NUMBER	SCALE NAME AND AUTHOR(S)
89	OBVIOUS HYSTERIA * HARMON AND WIENER
90	SUBTLE HYSTERIA * HARMON AND WIENER
91	IRREGULAR MEDICAL DISCHARGE * CALDEN, THURSTON, STEWART, AND VINEBERG
92	INTELLECTUAL EFFICIENCY * GOUGH
93	IMPULSIVITY * GOUGH
94	INNER MALADJUSTMENT * SIMON
95	INTELLECTUAL QUOTIENT * GOUGH
96	INTERNALIZATION RATIO * WELSH
97	JUDGED ANXIETY * WELSH
98	JUDGING COMPLEX BEHAVIOR * BENARICK
99	JUDGED MANIFEST HOSTILITY * SIEGEL
100	CORRECTION * MC KINLEY, HATHAWAY, AND MEEHL
101	PURE CORRECTION * WELSH
102	LIE * HATHAWAY AND MC KINLEY
103	PRELIMINARY CORRECTION * MEEHL AND HATHAWAY
104	LOW BACK PAIN (FUNCTIONAL) * HANVIK
105	LENGTH OF HOSPITALIZATION * MEEKER
106	LEADERSHIP * GOUGH
107	SECOND FACTOR, NEGATIVE * WELSH
108	HYPOMANIA * MC KINLEY AND HATHAWAY
109	PURE HYPOMANIA * WELSH
110	AMORALITY * HARRIS AND LINGOES
111	PSYCHOMOTOR ACCELERATION * HARRIS AND LINGOES
112	IMPERTURBABILITY * HARRIS AND LINGOES
113	EGO INFLATION * HARRIS AND LINGOES
114	OBVIOUS HYPOMANIA * HARMON AND WIENER
115	SUBTLE HYPOMANIA * HARMON AND WIENER
116	MASCULINITY-FEMININITY, FEMALE * HATHAWAY AND MC KINLEY
117	MASCULINITY-FEMININITY, MALE * HATHAWAY AND MC KINLEY
118	PURE MASCULINITY-FEMININITY * WELSH
119	PERSONAL AND EMOTIONAL SENSITIVITY * PEPPER AND STRONG
120	SEXUAL IDENTIFICATION * PEPPER AND STRONG
121	ALTRUISM * PEPPER AND STRONG
122	FEMININE OCCUPATIONAL IDENTIFICATION * PEPPER AND STRONG
123	DENIAL OF MASCULINE OCCUPATIONS * PEPPER AND STRONG
124	POSITIVE MALINGERING * COFER, CHANCE, AND JUDSON
125	MALADJUSTMENT SCORE * GALLAGHER
126	NORMALITY * MEEHL
127	CHOICE OF NURSING * BEAVER
128	NEURODERMATITIS * ALLERHAND, GOUGH, AND GRAIS
129	NEUROTICISM * WINNE
130	NEUROTICISM FACTOR * COMREY
131	NEUROTIC OVERCONTROL * BLOCK
132	NEUROTIC SCORE * RUESCH AND BOWMAN

SCALE NUMBER	SCALE NAME AND AUTHOR(S)
133	NEED FOR TREATMENT * SULLIVAN
134	NEUROTIC UNDERCONTROL * BLOCK
135	ORIGINALITY * BARRON AND GOUGH
136	FOURTH FACTOR * WELSH
137	PARANOIA * HATHAWAY AND MC KINLEY
138	PURE PARANOIA * WELSH
139	PERSECUTORY IDEAS * HARRIS AND LINGOES
140	POIGNANCY * HARRIS AND LINGOES
141	NAIVETE * HARRIS AND LINGOES
142	OBVIOUS PARANOIA * HARMON AND WIENER
143	SUBTLE PARANOIA * HARMON AND WIENER
144	PREDICTION OF CHANGE * SCHOFIELD
145	PSYCHOPATHIC DEVIATE * MC KINLEY AND HATHAWAY
146	PURE PSYCHOPATHIC DEVIATE * WELSH
147	FAMILIAL DISCORD * HARRIS AND LINGOES
148	AUTHORITY PROBLEMS * HARRIS AND LINGOES
149	SOCIAL IMPERTURBABILITY * HARRIS AND LINGOES
150	SOCIAL ALIENATION * HARRIS AND LINGOES
151	SELF-ALIENATION * HARRIS AND LINGOES
152	OBVIOUS PSYCHOPATHIC DEVIATE * HARMON AND WIENER
153	SUBTLE PSYCHOPATHIC DEVIATE * HARMON AND WIENER
154	PEDOPHILE * TOOBERT, BARTELME, AND JONES
155	PARIETAL-FRONTAL * FRIEDMAN
156	PROGNOSIS FOR SCHIZOPHRENIA * JENKINS
157	PARANOIA FACTOR * COMREY
158	PSYCHONEUROSIS * BLOCK
159	PATIENT-NORMAL AGREEMENT * WELSH AND HESTER
160	PRELIMINARY PROGNOSIS * FELDMAN
161	PSYCHOTIC TENDENCIES FACTOR * COMREY AND MARGGRAFF
162	PREJUDICE * GOUGH
163	PROGNOSIS FOR ELECTROSHOCK TREATMENT * FELDMAN
164	PSYCHOTIC SCORE * RUESCH AND BOWMAN
165	PSYCHASTHENIA * MC KINLEY AND HATHAWAY
166	PURE PSYCHASTHENIA * WELSH
167	PHARISAIIC VIRTUE * COOK AND MEDLEY
168	PATIENT-NORMAL DISAGREEMENT * WELSH AND HESTER
169	PSYCHOLOGICAL INTERESTS * GOUGH
170	PARANOID SCHIZOPHRENIA * ROSEN
171	SECOND FACTOR * WELSH
172	REIDIIISM * CLARK
173	SOCIAL RESPONSIBILITY * GOUGH, MC CLOSKY, AND MEEHL
174	SOCIAL RESPONSIBILITY, REVISED * GOUGH, MC CLOSKY, AND MEEHL
175	REIDIIY, FEMALE * CERVIN
176	REIDIIY, MALE * CERVIN

Table V. SCALE IDENTIFICATION FOR 220 SCALES--continued

SCALE NUMBER	SCALE NAME AND AUTHOR(S)
177	ROLE PLAYING * MC CLELLAND
178	STABILITY OF PROFILE, FEMALE * MILLS
179	STABILITY OF PROFILE, MALE * MILLS
180	SCHIZOPHRENIA * HATHAWAY AND MC KINLEY
181	PURE SCHIZOPHRENIA * WELSH
182	SOCIAL ALIENATION * HARRIS AND LINGOES
183	EMOTIONAL ALIENATION * HARRIS AND LINGOES
184	LACK OF EGO MASTERY, COGNITIVE * HARRIS AND LINGOES
185	LACK OF EGO MASTERY, CONATIVE * HARRIS AND LINGOES
186	LACK OF EGO MASTERY, DEFECTIVE INHIBITION * HARRIS AND LINGOES
187	BIZARRE SENSORY EXPERIENCES * HARRIS AND LINGOES
188	SEX DIFFERENTIAL * DRAKE
189	SELF-SUFFICIENCY * WOLFF
190	SOCIAL INTROVERSION * DRAKE
191	PURE SOCIAL INTROVERSION * WELSH
192	SCHIZOPHRENIA, CONDUCT DISORDER DIFFERENTIATION * HARDING, HOLZ, KAWAKAMI
193	SOMATIZATION REACTION * ROSEN
194	SOCIAL DESIRABILITY * FORDYCE
195	SOCIAL DESIRABILITY, REVISED * EDWARDS
196	SOCIAL PARTICIPATION * GOUGH
197	SOCIAL PRESENCE * GOUGH
198	SOCIOECONOMIC STATUS * NELSON
199	SOCIAL STATUS * GOUGH
200	SOCIAL STATUS, REVISED * GOUGH
201	SEXUAL DEVIATION * MARSH, HILLIARD, AND LIECHTI
202	SCHIZOPHRENIA CORRECTION * WELSH AND GOUGH
203	SHYNESS FACTOR * COMREY
204	TRUE ANSWER * COHN
205	TOLERANCE * GOUGH
206	TEACHING POTENTIALITY * GOWAN AND GOWAN
207	TEST-RETEST * BUECHLEY AND BALL
208	TEST-TAKING DEFENSIVENESS * HANLEY
209	ULCER PERSONALITY * SCODEL
210	UNDERACHIEVEMENT * MC QUARY AND TRUAX
211	WORK ATTITUDE * TYDLASKA AND MENGEL
212	PLUS-GETTING TENDENCY * HATHAWAY
213	CANNOT SAY SCORE * HATHAWAY AND MC KINLEY
